Dear Career Department:

I currently work for Turning Stone Resort · Casino in Verona, New York. I am a web developer for their IT department. I am currently working on building web applications to utilize relational databases for a stronger marketing campaign in the Food and Beverage, Entertainment, and Fitness divisions of the Oneida Nation Enterprises. The web application is able to track the "who, where, when" via a membership card, state license, and/or casino gaming card. The languages I am currently using to develop the applications are PHP, JavaScript, CSS, MySQL, and XML.

For two years prior to working at Turning Stone Resort Casino, I worked for Sim Ops Studios, a startup company in Pittsburgh, Pennsylvania. Being the lead modeler of a startup company allowed me to push my abilities to turn out quality work and to meet strict deadlines. I have taken part in all stages of development from concept to completion. I mostly worked on training software for firefighters using game technology, such as "CODE3D," "FireSlayer Challenge: Thermal Response" and "Thermal Enforcer".

I would be an asset to your company because I am motivated and adapt well to challenging tasks. I am working on ways of combining both web development and my education of 3D to create rich website designs and applications for the betterment of the casino's future. You can view my web portfolio at www.brokenlegguy.com.

Thank you for your consideration.
